

Chromatic Personalities

Keys are **grouped by personality**, the audio feature with the highest z-score above the median ($z > 1$). Keys with no significant deviation are **Uncategorized**. The dashed grey polygon is the **median** across all keys.

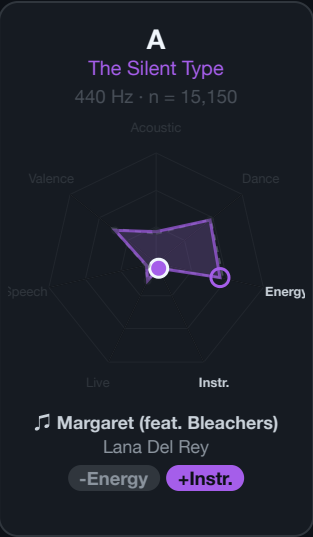

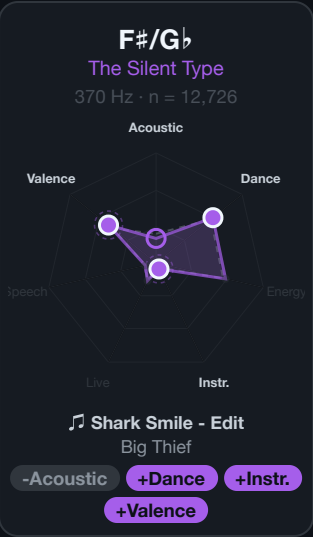

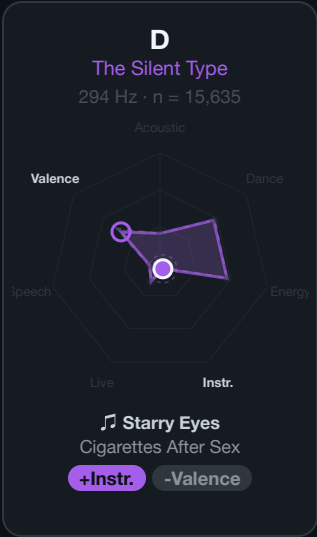

Chromatic Scale, C4 to B4 (coloured by personality label)

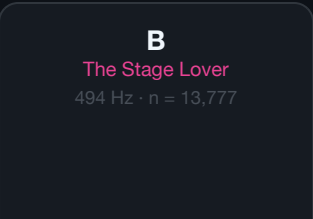

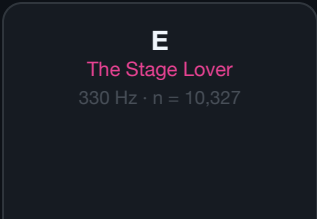

● The Groover (danceability) · 1 key

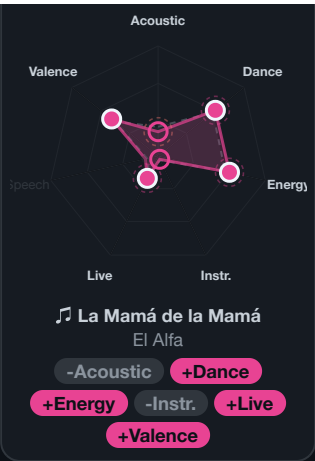

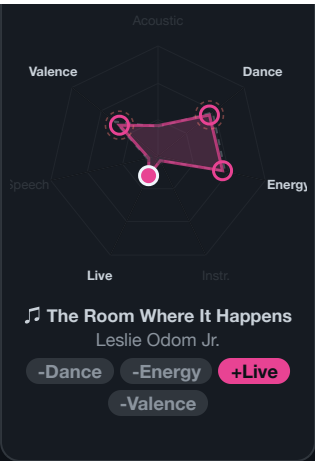

● The Silent Type (instrumentalness) · 3 keys

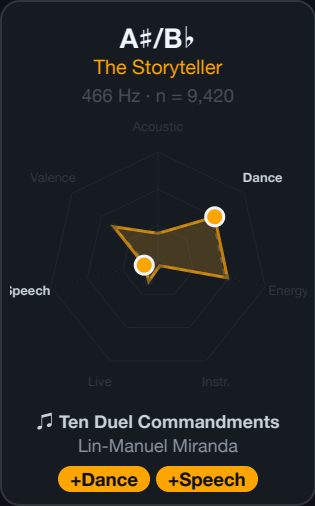

● The Stage Lover (liveness) · 2 keys

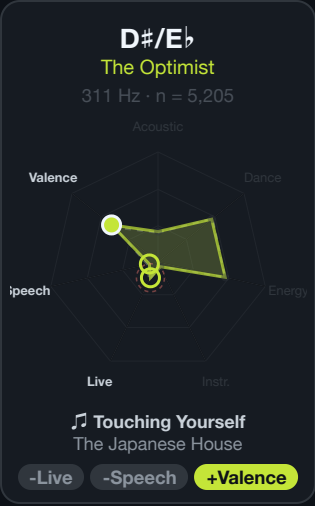

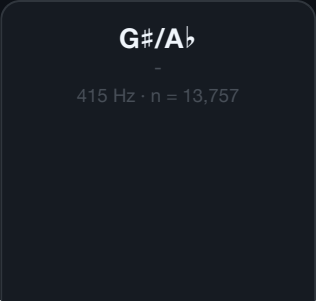

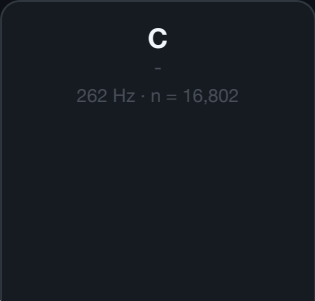

● **The Storyteller** (speechiness) · 1 key

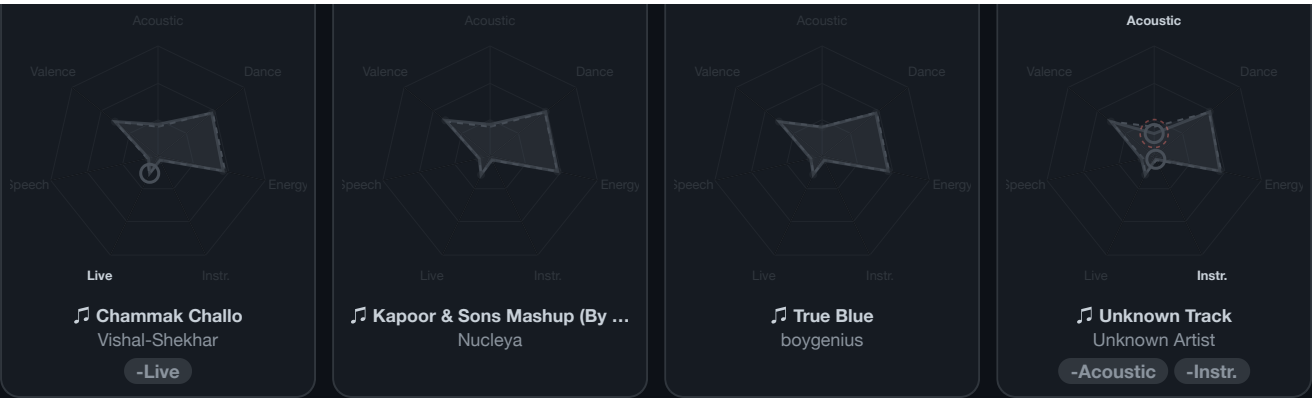

● **The Optimist** (valence) · 1 key

● **Uncategorized** (no feature $z > 1$) · 4 keys

● Median polygon (dashed) ● Filled dot = sig. above median (z > 1) ○ Ring dot = sig. below median (z < -1) ● Dim dot = within normal range

Personality Label Glossary

Each key is assigned a label based on the feature with the highest z-score above the median (z > 1). Keys with no significant deviation are Uncategorized. Features are in alphabetical clockwise order.

Label	Dominant Feature	What It Means
The Groover	Danceability	Songs in this key have the steadiest beat and most groove-friendly rhythms. High danceability relative to other keys.
The Silent Type	Instrumentalness	Vocals take a backseat. These keys host more instrumental tracks: ambient, classical, film scores, lo-fi beats.
The Stage Lover	Liveness	You can hear the crowd. Tracks in this key have more "live" quality: audience noise, stage energy, raw performance feel.
The Storyteller	Speechiness	More spoken or rapped content than other keys. These tracks lean toward vocal delivery, narrative, and word-heavy arrangements.
The Optimist	Valence	Happy, cheerful, euphoric: the sunniest key. High valence means the music conveys positive emotion more than average.
